embarcadero®

Embarcadero® RadPHP™ XE2 provides the fastest way to build Web, Facebook®, and touch-enhanced mobile phone and tablet applications with the only visual PHP IDE and framework. RadPHP XE2 offers over 200 drag-anddrop PHP components for visually building Uls, displaying and interacting with data and services such

connectivity.

DEVELOP FASTER WITH THE ONLY VISUAL PHP IDE

RadPHP is the only PHP development solution with drag-and-drop visual design. RadPHP provides both code and design views of PHP applications and HTML pages in the integrated development environment (IDE). Use the visual design view in RadPHP to build user interfaces and database connections by simply dragging and dropping components onto a form. Changes in code and the visual designers are always kept in sync.

CREATE MOBILE APPS AND MOBILE WEB APPS

Use RadPHP to create web applications that are optimized for mobile phones and devices. Your apps will look great and give your users functionality similar to native mobile apps. You can also build apps that interact with mobile device hardware including cameras, accelerometers, and GPS - and distribute them via the Apple and Android app stores.

GET ALL THE TOOLS YOU NEED FOR PHP WEB DEVELOPMENT

RadPHP delivers a complete IDE with all the tools you need for PHP coding and development. The customizable source code editor, integrated debugging, performance profiling and wizards for everything from new application creation to mobile deployment help simplify tasks and make your development more productive every step of the way.

THE FASTEST WAY TO BUILD APPLICATIONS FOR FACEBOOK

With RadPHP you can quickly create applications for the popular Facebook social networking site. The included Facebook application wizard guides you through the steps to build your application and you can use the built-in components to easily incorporate Facebook functionality including user information and friend lists.

New in RadPHP XE2

- Build touch-optimized mobile web apps for phones and tablets
- Mobile page designer
- Deploy standalone mobile apps to iOS and Android
- Incorporate device functionality into mobile applications
- Expanded Zend Framework component set

Key Product Features

- PHP editor with coding tools
- Powerful Integrated debugger
- Performance profiling
- Database and query tools
- Visual form designer
- HTML visual designer
- Library of over 200 components
- Project management tools
- Facebook and jQuery components
- DataSnap[™] connectivity
- Component-based database connectivity
